HR Operations

CONTENTS

What's in this guidebook

Written for the CHRO and people-leadership team. It explains what the platform is, what it does, how every feature works, and how to roll it out across the function.

1	Executive overview — what this is and why it matters	3
2	How it works — architecture, privacy & the data model	4
3	People Analytics — the workforce dashboard	5
4	HR Brain — the on-device recommendation engine	6
5	Function Analytics — the five HR functions	8
6	Scorecard — targets & industry benchmarks	9
7	Scenario Planner — model hires, cuts & cost	10
8	HR Newsletter — the automated board pack	11
9	Data Intake & the Directory	12
10	Implementation plan — a phased rollout	13
11	Governance, cadence & appendix	14

A note on the screenshots

Every screen in this guide is shown running on a **sample organisation ("Acme")** in demo mode. Your own logo, colours and name apply throughout (the platform is white-label), and your real data replaces the sample the moment you upload it.

One place to see, diagnose and act on the people function

The HR Analytics platform turns the workbooks your teams already produce — the Keka employee master, recruitment trackers, payroll registers, the L&D log — into a single, board-ready view of the workforce. It then goes a step further than a dashboard: a built-in **HR Brain** reads every domain, flags the issues that matter, explains the likely cause, and proposes a remedy plan — all computed on your own device.

The problem it solves

People data lives in silos — an HRMS export here, a recruiter's spreadsheet there, payroll in a third system. Pulling it together for a board pack is a manual monthly scramble, and by the time it's assembled it answers "*what happened*" but rarely "*what should we do about it*." This platform closes both gaps.

See

A unified dashboard across People, Talent Acquisition, Performance, Payroll, L&D and HR Operations — headcount, attrition, diversity, cost, funnel, completion, compliance.

Diagnose

The HR Brain inspects all domains and surfaces known & emerging issues, each with evidence, a likely root cause and a step-by-step remedy — plus an HR Health score and trend.

Decide

A prioritised Now / Next / Later roadmap with impact, effort and the rupee value at stake — and a Scenario Planner to cost hiring and restructuring before you commit.

Report

A one-click monthly Newsletter — a polished, print-ready board pack with an executive brief, a scorecard, the diagnosis and a prioritised action plan.

What makes it different

- **It runs entirely on your machine.** No server, no cloud, no AI service. Sensitive people data never leaves the device — a non-negotiable for HR.
- **It recommends, not just reports.** The HR Brain is a deterministic, transparent rules engine: every finding shows the exact evidence and logic behind it. It is decision support you can audit, not a black box.
- **It works with the data you already have** and degrades gracefully — start with the employee master alone and switch on each function as its feed comes online.
- **It is white-label and board-ready** out of the box.

The honest framing

The HR Brain is a sophisticated set of HR heuristics, not an oracle. Benchmarks are illustrative reference bands until calibrated to your sector; cost-per-hire and severance figures are estimates. Every recommendation is a starting point for a human decision — and the tool always shows its working.

Architecture, privacy & the data model

A single file that runs in your browser

The entire platform is one self-contained file (about 2.8 MB) that opens in any modern browser. There is nothing to install, no database to provision and no network connection required. You can run it from a shared drive, email it to a colleague, or host it behind your own SSO — it behaves identically.

CONCERN	HOW THE PLATFORM HANDLES IT
Data residency	All processing is in-browser, on your device. No data is ever transmitted anywhere.
Persistence	Your working data is auto-saved locally in the browser. You can also export a single encrypted, compressed workspace file to move between machines.
Security	Optional passphrase encryption on the saved workspace. No credentials, no accounts, no telemetry.
AI / external services	None. The HR Brain's narrative and recommendations are generated by local, deterministic rules.

The "true HR suite" data model

The platform spans the CHRO's direct functions. Each team submits a standardised workbook; the suite ingests each as its own dataset and computes that domain's metrics, then layers cross-functional intelligence on top.

DOMAIN	FEED	DRIVES
Core People	Employee master (e.g. Keka export)	Headcount, org structure, movement, tenure, diversity, attrition
Talent Acquisition	Requisition tracker	Funnel, time-to-fill, offer-accept, ageing requisitions, cost/quality of hire
Performance (PMS)	Review cycle export	Completion, rating mix, 9-box, PIP load, calibration
Payroll & Cost	Payroll register / aggregate + statutory	Cost per head, overtime, variable pay, statutory compliance
Learning & Development	Programme + enrolment log	Completion, coverage, mandatory/compliance training, spend
HR Operations	Assets, contracts, on/off-boarding	Asset recovery, contract renewals, lifecycle checklists
Engagement	Survey export	eNPS, driver scores

Two feeds, reconciled

The platform is built to consume **both** the system-generated employee master (Keka) **and** the snapshot your HR team maintains by hand — treating the HR-maintained file as the master where they differ, and surfacing any disagreement between the two so headcount is never quietly wrong.

The workforce dashboard

The default view: a complete read of your active workforce, organised into tabs for Workforce, Diversity, Attrition & Risk, Movement & Org, and Pay & Cost. Every chart and table can be filtered (by department, location, level, etc.) and exported.

People Analytics — headcount, tenure, diversity and movement on the sample organisation.

How to use it

- 1 Pick a lens.** Use the sub-tabs (Workforce, Diversity, Attrition & Risk, Movement & Org, Pay & Cost) to move between the major people questions.
- 2 Filter.** Narrow to a department, entity or location with the filter bar; every KPI and chart updates instantly. Save a filter combination as a named view to return to it.
- 3 Compare periods.** When you have more than one monthly snapshot, KPI cards show the change versus the prior period, coloured for good/bad direction.
- 4 Export.** Any table exports to CSV; any chart to PNG for slides.

An on-device recommendation engine

HR Brain reads every domain at once and produces a CHRO-grade diagnosis: an **HR Health score** with period-over-period direction, a ranked list of **findings** (each with evidence, a likely cause and a remedy plan), a prioritised **action roadmap**, and an **HR maturity** assessment. It is fully local and deterministic — no AI service is involved.

HR Brain — health score (with trend vs last period), summary chips, and findings with evidence, likely reason and remedy.

Reading the page, top to bottom

ELEMENT	WHAT IT TELLS YOU
HR Health score (0–100)	An overall measure that falls as material issues accumulate (a critical issue costs far more than a minor one). The band reads Excellent → Critical.
Trend chip (e.g. ▼ -4 vs Apr 2026)	Direction versus the prior period — the single most exec-relevant signal. Computed by re-running the diagnosis on last period's data.
Summary chips	Counts by severity and confidence, plus " <i>N new this period</i> " — how many issues newly emerged.
Finding cards	Each issue, ranked by severity, with: the <i>evidence</i> that triggered it, a <i>likely reason</i> , a <i>remedy plan</i> , the accountable owner, and a "View the evidence" deep-link to the underlying analytic.

Known vs. emerging, new vs. resolved

Each finding is tagged **Known** (a hard threshold breached), **Likely** or **Possible** (inferred or early-warning). Findings that appeared this period carry a blue **NEW** badge; issues that cleared since last period are celebrated in a "**Resolved since last period**" line — so the page shows progress, not just problems.

What the Brain diagnoses today

Retention (compounding risk, regrettable & early attrition, department hotspots), pay equity, statutory compliance, performance management (review completion, PIP load, rating calibration), talent-acquisition throughput (offer-accept, ageing requisitions), L&D coverage & mandatory-training compliance, employee engagement, organisation design, workforce-cost concentration, HR-operations risk (contract renewals, asset recovery), data-source reconciliation, plus benchmark and early-warning watch lists.

From diagnosis to a prioritised plan

Below the findings, HR Brain sequences the work into a consulting-style roadmap and scores your HR maturity.

The prioritised Now / Next / Later roadmap (with value at stake) and the 1–5 HR maturity heat-map.

The action roadmap

Every finding is placed on an impact × effort grid and sorted into three horizons. Quick wins and anything critical go **NOW**; high-impact major initiatives go **NEXT**; low-impact or high-effort/low-payoff items go **LATER**. The single highest-priority retention initiative carries an estimated **rupee value at stake** (annual attrition replacement cost) so the business case is explicit.

HR maturity assessment

Nine capability dimensions — Talent Acquisition, Performance, Reward & Pay Equity, Retention, Engagement, Diversity & Inclusion, Learning & Development, Org Design, and HR Operations & Compliance — are each scored 1–5 (Ad-hoc → Optimised) from your data, with a transparent basis and a "to advance" hint. Dimensions degrade when secondary signals stack (e.g. Performance drops when the PIP load is elevated on top of a completion gap).

How to work it in a monthly review

Start at the health trend (are we improving?), scan the NEW badges (what just emerged?), then work the **Now** column of the roadmap with the named owners. Re-check next month — the trend and new/resolved markers tell you whether the actions are landing.

The five HR functions, in depth

A dedicated tab per function — Talent Acquisition, Performance, Learning & Development, Payroll & Cost, HR Operations, Engagement, plus a Cross-Functional view. Each shows that team's KPIs, charts, tables and its own watch-outs.

Function Analytics — here the Talent Acquisition view: hiring funnel, open requisitions, offer-accept rate and cost per hire.

What each function surfaces

FUNCTION	HEADLINE METRICS & WATCH-OUTS
Talent Acquisition	Funnel conversion, offer-accept rate, ageing requisitions (>90 days), cost per hire, source mix
Performance (PMS)	Review completion, rating distribution, 9-box, promotions recommended, PIP population & outcomes
Learning & Development	Completion rate, coverage, mandatory/compliance completion, training hours, spend per learner
Payroll & Cost	Cost per head, overtime %, variable %, statutory on-time, payroll errors
HR Operations	Assets allocated/lost, contract renewal pipeline, on/off-boarding checklist completion, asset recovery
Cross-Functional	Compound risk by department, attrition economics, regrettable attrition

Functions with no data yet show an "awaiting first upload" placeholder — the suite fills in automatically as each team's feed comes online.

Targets & industry benchmarks

The management-by-objective layer: your headline KPIs as a RAG (red/amber/green) scorecard against targets you set, with period-over-period movement and an industry benchmark band for context.

The Scorecard — current value, change vs last period, the typical industry band (better/typical/worse), your target, and RAG status.

How to use it

- 1 Set targets.** Edit any KPI's target inline; the RAG status recomputes immediately. Targets persist with your workspace.
- 2 Calibrate benchmarks.** The platform ships illustrative industry bands; click "Edit benchmarks" to replace them with sourced figures for your sector and region.
- 3 Read the position.** Each KPI shows whether you're ▲ better, ● typical, or ▼ worse than the band — direction-aware, so "lower is better" metrics read correctly.

Honesty by design

The default benchmark bands are general reference ranges, not a sourced survey — the platform labels them as such, and the Brain treats "below benchmark" as a *likely*, not confirmed, signal until you supply real peer data.

Model hires, cuts & restructures — with the full cost

A what-if sandbox for proposals. Build a plan from hire / cut / move operations and watch the headcount and cost impact recompute instantly — including the upfront one-time costs a board paper needs.

DEPARTMENT	BASELINE	SCENARIO	Δ
Customer Support	16	13	-3
Finance	12	12	—
Human Resources	8	8	—
Marketing	8	8	—

Scenario Planner — a plan combining hires and cuts, with run-rate, one-time hiring and severance costs, and the Year-1 cash impact.

What it computes

OUTPUT	MEANING
Active headcount	Resulting headcount and the change vs baseline, by department.
Monthly & annualised cost	The ongoing run-rate change, using real per-department payroll cost (or an assumption you set).
One-time hiring cost	Upfront recruitment spend = external hires × cost-per-hire.
One-time exit cost	Severance = months of pay × the cost of the roles cut (an editable assumption).
Year-1 cash impact	The headline figure: run-rate × 12 plus the one-time costs — for a restructuring it nets the saving against severance, showing the payback.

Export the whole scenario — operations, summary and per-department impact — to CSV to attach to a proposal.

The automated board pack

One click assembles a polished, print-ready monthly newsletter for the CHRO and function heads — the deliverable a consulting firm would charge for, generated from your live data in seconds.

The screenshot displays the Acme HR Analytics interface. On the left is a sidebar with navigation options: People Analytics, HR Brain, Directory, Function Analytics, Scorecard, Scenario, Newsletter (highlighted), Data Intake, and Branding. Below the sidebar are sections for Commands (Ctrl K), Dark mode toggle, and Workspace (Save workspace, Encrypt with passphrase, Load workspace, Choose file, and Demo data upload). The main content area shows a 'Demo mode' notice, an 'Upload your data' button, and the 'HR Newsletter' header with 'Print / Save as PDF' and 'Download facts pack (.md)' buttons. The newsletter content includes a title 'Acme HR Analytics — HR Newsletter', a date '2026-05-05', and a generation timestamp 'Generated 9 June 2026 · 10/10 areas reporting'. It features a 'CONTENTS' table of contents with 10 numbered items: Executive Brief, HR Brain — Diagnosis, Scorecard vs Targets, People & Org, Attrition Risk, Pay Equity, Talent Acquisition, Performance (PMS), Learning & Development, Payroll & Cost, HR Operations, Engagement, Cross-Functional Risk, and a Prioritised Action Plan. Below this is a 'CHRO Executive Brief' section with a summary paragraph and a 'Since Apr 2026' digest: HR Health ▼ -4 · 5 new · 0 resolved. At the bottom are four KPI cards: PEOPLE & ORG - ACTIVE HEADCOUNT (135, 90.0% of records), ATTRITION RISK - HIGH RISK (0, score ≥ 65 of 135), PAY EQUITY - GENDER PAY GAP (18.4%, women's vs men's median pay), and TALENT ACQUISITION - OFFER-ACCEPT RATE (77.1%, 37/48 offers).

The HR Newsletter — a CHRO executive brief leading with the "since last review" digest, followed by the scorecard, diagnosis and action plan.

What's in the pack

- **CHRO executive brief** — a one-paragraph summary, headline KPIs, wins, risks and movers, led by a "Since <last period>: HR Health ▼ -4 · N new · M resolved" digest.
- **Scorecard vs targets** — with the industry-benchmark column.
- **HR Brain diagnosis** — health & trend, findings (each with reason and remedy), the Now/Next/Later roadmap with value at stake, and the maturity assessment.
- **One section per function** — and a prioritised, owner-tagged action plan to close.

How to use it

- 1 **Open the Newsletter tab** — it builds automatically from whatever data is loaded.
- 2 **Print to PDF** — the layout is print-optimised (one function per page, tables and cards never split). Use the browser's "Save as PDF".
- 3 **Or export the facts pack** — a plain-Markdown version to paste into email or Slack.

Getting your data in

Data Intake is where each team loads its workbook. The platform provides a standard template per domain, reads the as-of date automatically, and validates as it goes.

Load workspace

Choose file No file chosen

Demo data — upload your own in Data Intake to begin.

Demo mode — you're exploring a sample organisation, and nothing here is saved. Upload your own data to begin; it stays on this device and is kept across refreshes.

[Upload your data →](#)

Data Intake

Pick the domain, upload its workbook (.xlsx or .csv), review the preview, then import. Need the format? Download the template — it includes the exact columns, a data dictionary and a README.

You're exploring **demo data**. Your first import replaces it with your own data — saved on this device and kept across refreshes. Start with the **Employee Master**.

Domain: Employee Master As-of date (optional): dd-mm-yyyy [Download template](#)

Monthly employee roster — the spine every other domain joins to. Accepts Keka HRMS exports (banner/footer rows and the "Generated on ..." as-of are handled automatically). The as-of date is read automatically from the filename or the export footer. Set it here only to override.

Required columns: none

Upload Employee Master (.xlsx / .csv)

Choose file No file chosen

Loaded data

DOMAIN	LATEST AS-OF	ROWS
Performance — Review Cycle	2025-09-30	150
Employee Master	2026-05-05	150
Talent Acquisition — Requisitions	2026-05-05	11
Payroll — Department Aggregate	2026-05-05	8
Payroll — Per-Employee Detail	2026-05-05	135
Payroll — Statutory Compliance	2026-05-05	5
L&D — Programs	2026-05-05	10

Data Intake — pick the domain, optionally override the as-of date, download the template, and upload the .xlsx / .csv.

How to use it

- 1 Pick the domain** (Employee Master, Talent Acquisition, Performance, Payroll, L&D, HR Operations, Engagement).
- 2 Download the template** if the team needs the exact columns — it lists required vs optional fields and the join key.
- 3 Upload the file.** The as-of date is read from the filename or the export footer; override it only if needed. The platform confirms what it loaded and flags any issues.

The Directory

A searchable, filterable, sortable roster of the full employee population, with saved views and CSV export — the operational lookup that complements the analytical views.

Graceful by design

It works on day one with just the employee master, accepts both per-employee detail and aggregate-only variants, and ignores fields you've retired (for example, the legacy pay-band column).

A phased rollout

You can be live with real analytics in an afternoon, then switch on each function as its feed becomes available. A suggested sequence:

PHASE 0 Stand up — Week 1

- Open the platform and upload the current **employee master** (the Keka export) plus the HR-maintained snapshot. People Analytics, the Directory and the first HR Brain findings light up immediately.
- Apply your **branding** (logo, colours, name) on the Branding tab.
- Confirm the two feeds reconcile; resolve any headcount disagreement.

PHASE 1 Bring the functions online — Weeks 2–6

Onboard one feed at a time, in priority order. Each unlocks its Function Analytics tab and the matching HR Brain rules.

WEEK	FEED	UNLOCKS
2	Talent Acquisition	Funnel, offer-accept, ageing requisitions, cost-of-hire
3	Performance (PMS)	Completion, 9-box, PIP load, calibration
4	Payroll + statutory	Cost per head, statutory compliance, scenario cost basis
5	Learning & Development	Coverage, mandatory-training compliance, spend
6	HR Operations + Engagement	Contracts, assets, lifecycle; eNPS

PHASE 2 Calibrate — Week 7

- Set **targets** on the Scorecard to your commitments.
- Replace the illustrative **benchmark bands** with sourced figures for your sector and region.
- Set the Scenario **cost assumptions** (cost-per-hire, severance months) for your context.

PHASE 3 Operate — ongoing monthly cadence

- 1 **Refresh feeds** after month-end close (each owner re-uploads their workbook).
- 2 **Review HR Brain** — health trend, new issues, the Now column of the roadmap.
- 3 **Generate the Newsletter** and circulate the board pack.
- 4 **Action & track** — assign the roadmap items to owners; next month's trend and resolved markers confirm whether they landed.

Running it well

Ownership & cadence

FEED	OWNER	CADENCE
Employee master	HR Operations / HRIS	Monthly (post-close)
Recruitment tracker	Talent Acquisition lead	Monthly
Performance export	HRBP / PMS owner	Per review cycle
Payroll + statutory	Payroll lead	Monthly
L&D log	L&D lead	Monthly
HR Operations	HR Admin	Monthly

Data quality & privacy

- Keep the join key (`employee_number`) consistent across feeds so cross-functional views line up.
- Use the Data Sources reconciliation tab to keep the two employee feeds in agreement.
- Save an **encrypted** workspace if moving it between machines; nothing is ever uploaded.

Glossary

TERM	DEFINITION
HR Health score	0–100 overall measure; falls as open issues accumulate, weighted by severity.
Finding confidence	Known (threshold breached) · Likely (inferred) · Possible (early warning).
Regrettable attrition	Exits of high-rated / high-potential people.
eNPS	Employee Net Promoter Score — promoters minus detractors.
9-box	Performance × potential grid used in talent reviews.
Value at stake	Estimated annual attrition replacement cost attached to the top retention initiative.

This guidebook describes the platform running on a sample organisation. All analytics, recommendations and figures shown are generated locally from sample data; your own data and branding replace them on first use. Recommendations are decision support, not automated action — every finding shows the evidence and logic behind it.

— End of guidebook —
